

## PM#1 dryer&press section modernization for Arctic Paper Kostrzyn, Poland

PMP has signed the contract for the second stage of PM#1 modernization. This time it will be the modernization of 1<sup>st</sup> dryer group to increase drying capacity. PM#1 speed is 700 mpm and the width is 5300 mm. The machine produces newsprints&writing papers. The delivery and start-up of the second stage are scheduled for year 2007. Just to remind you in December 2006 PMP successfully finished the first stage of PM#1 press section modernization for Arctic Paper Kostrzyn which is one of Europe's leading companies in the field of high-quality, graphic fine paper. The first stage was focused on the press section modernization and it was carried out according to the time schedule. PMP modified the configuration of the unit's second press and at the same time the new press rolls were installed. These two sections of the paper machine will be adjusted to higher working speeds to enable the machine capacity increase in the future.
